

FAMILY FINANCIAL PLAN

Berdia Monson

A plain-language overview of the family's land, solar lease, restaurant, and proposed trust — written so everyone starts from the same place.

Prepared for Grandma · May 2026

Monson Family · Jefferson County, Arkansas

FAMILY FINANCIAL PLAN

Berdia Monson

A comprehensive plan for organizing, protecting, and growing the family's assets
across generations.

This brief explains what is happening with the family's land, solar lease, and restaurant — and what we recommend doing about it. It is written in plain language so everyone starts from the same place.

This is not a vote. No one is being asked to give up anything. The goal is to make sure everyone understands the situation, the numbers, and the plan — and that Grandma's wishes for how these assets are used are carried out clearly and intentionally.

The Family's Assets

The family has three valuable assets. Today, they sit apart from each other — unconnected, unstructured, and working alone.

The land is the foundation. Grandma holds sole title. It has been in the family for generations. It is not being sold under any scenario.

The solar lease is a 30-year contract with Orion Renewables on 94.75 acres. Construction was targeted for **summer 2026**, but Orion may push that date — the family is following up for a firm timeline. The \$800/acre operations rent does not start until the project reaches **commercial operation (COD)**, which could be late 2026, 2027, or later depending on construction. The lease pays \$800 per acre per year at COD, increasing 2% annually.

The restaurant at Grider Field is the only asset that produces real income today — approximately \$500,000 in annual revenue with over 10 years of operating history. Stanley runs the day-to-day operations. The restaurant is set to be inherited by Stanley, similar to how the coin collection is being inherited by Darius.

The coin collection is a set of precious coins being inherited by Darius. Once appraised and placed into the trust, the coins strengthen the trust's balance sheet. If the appraisal shows significant value, the coins serve as dedicated collateral for Darius's real estate advances. If the value is modest, the trust funds real estate ventures from its general reserves and operating cash flow — the same pool that funds all other LLCs. Either way, Darius's gate to trust capital is his track record, not the coins.

Life insurance could be one of the largest capital injections into the trust — but the full picture is still **pending confirmation**. On the April 12 call Grandma mentioned several policies; the family believes there may also be a larger policy not yet documented. Do not plan around a specific death benefit until full policy documents and recent annual statements are gathered and reviewed with the trust attorney. Proceeds would be managed by the trust, not distributed as a lump sum, and beneficiary designations must align with the trust structure.

Solar Lease Payment Shares

The solar lease is on Grandma's land. The siblings receive shares of the lease payments as follows:

The Solar Lease — What It Actually Pays

The solar project is currently in development. Construction was targeted for **summer 2026**, but that date may slip — Orion has not confirmed a firm schedule. The \$800/acre rent does not start until the project reaches commercial operation (COD), which could be late 2026, 2027, or later.

Once the project reaches commercial operation, here is what each person receives:

OWNER	SHARE	YEAR 1	PER MONTH (YR 1)
Berdia (Grandma)	50.00%	\$37,900	\$3,158
Reneta	16.67%	\$12,630	\$1,052
Charles	16.67%	\$12,630	\$1,052
Kim	16.67%	\$12,630	\$1,052
Total	100.00%	\$75,800	\$6,317

Full 30-Year Payment Schedule

Projected annual payments for the full life of the lease, assuming a 2% annual escalator from the Year 1 base of \$75,800 total.

YEAR	GRANDMA (50%)	RENETA (16.67%)	CHARLES (16.67%)	KIM (16.67%)	TOTAL
1	\$37,900	\$12,633	\$12,633	\$12,633	\$75,800
2	\$38,658	\$12,886	\$12,886	\$12,886	\$77,316
3	\$39,431	\$13,144	\$13,144	\$13,144	\$78,862
4	\$40,220	\$13,407	\$13,407	\$13,407	\$80,440
5	\$41,024	\$13,675	\$13,675	\$13,675	\$82,048
6	\$41,845	\$13,948	\$13,948	\$13,948	\$83,689
7	\$42,681	\$14,227	\$14,227	\$14,227	\$85,363
8	\$43,535	\$14,512	\$14,512	\$14,512	\$87,070
9	\$44,406	\$14,802	\$14,802	\$14,802	\$88,812
10	\$45,294	\$15,098	\$15,098	\$15,098	\$90,588
11	\$46,200	\$15,400	\$15,400	\$15,400	\$92,399
12	\$47,124	\$15,708	\$15,708	\$15,708	\$94,247
13	\$48,066	\$16,022	\$16,022	\$16,022	\$96,132
14	\$49,027	\$16,342	\$16,342	\$16,342	\$98,055
15	\$50,008	\$16,669	\$16,669	\$16,669	\$100,016
16	\$51,008	\$17,003	\$17,003	\$17,003	\$102,016
17	\$52,028	\$17,343	\$17,343	\$17,343	\$104,056
18	\$53,069	\$17,689	\$17,689	\$17,689	\$106,137
19	\$54,130	\$18,043	\$18,043	\$18,043	\$108,260
20	\$55,213	\$18,404	\$18,404	\$18,404	\$110,425

YEAR	GRANDMA (50%)	RENETA (16.67%)	CHARLES (16.67%)	KIM (16.67%)	TOTAL
21	\$56,317	\$18,772	\$18,772	\$18,772	\$112,634
22	\$57,443	\$19,148	\$19,148	\$19,148	\$114,886
23	\$58,592	\$19,531	\$19,531	\$19,531	\$117,184
24	\$59,764	\$19,921	\$19,921	\$19,921	\$119,528
25	\$60,959	\$20,320	\$20,320	\$20,320	\$121,918
26	\$62,179	\$20,726	\$20,726	\$20,726	\$124,357
27	\$63,422	\$21,141	\$21,141	\$21,141	\$126,844
28	\$64,691	\$21,563	\$21,563	\$21,563	\$129,381
29	\$65,984	\$21,995	\$21,995	\$21,995	\$131,968
30	\$67,304	\$22,434	\$22,434	\$22,434	\$134,608
Cumulative	\$1,547,544	\$515,706	\$515,706	\$515,706	\$3,094,662

When the solar project reaches commercial operation, the first full year of rent is **\$75,800** total. No one in the family currently depends on that money for day-to-day expenses — which is why the April 12 meeting raised a one-time choice before habits form.

This is separate from the long-term plan (Grandma's 50% managed through the trust, siblings keeping 16.67% each). It is only about what happens to **year-one cash** when rent first starts.

SCENARIO A — REINVEST ALL YEAR-ONE INTO TRUST

STANLEY'S APRIL 12 PROPOSAL

Everyone agrees to forgo year-one checks so the trust starts with cash on hand — not just borrowing capacity.

GRANDMA (50%)

\$0 to Grandma · **\$37,900** to trust

RENETA, CHARLES, KIM (16.67% EACH)

\$0 each · **\$12,633** each to trust

TRUST CASH FROM YEAR-ONE RENT

\$75,800

PHASE 1 TARGET (\$150K–\$250K)

Year-one cash covers roughly **30–50%** of the low end before any loan. Remaining Phase 1 capital still comes from solar-backed borrowing (\$200K–\$250K on Grandma's share) plus restaurant-backed lending once financials are clean.

YEARS 2–30

Normal split resumes — siblings receive 16.67% directly each year; Grandma's 50% continues through the trust as designed.

TRADEOFF

No one takes a year-one check. Trust gets an immediate **\$75,800** seed for reserves, ancillary services startup, and debt-service cushion — voluntary, one-time.

SCENARIO B — DISTRIBUTE YEAR-ONE AS PLANNED

DEFAULT OWNERSHIP SPLIT

Year-one rent is paid out the same way as every other year — each owner receives their share.

GRANDMA (50%)

\$37,900 (under the trust plan, Grandma's share is managed and reinvested through the trust — not spent down personally)

RENETA, CHARLES, KIM (16.67% EACH)

\$12,633 each in hand

TRUST CASH FROM YEAR-ONE RENT

\$0 extra beyond Grandma's ongoing trust structure

PHASE 1 TARGET (\$150K–\$250K)

Funded entirely from borrowing and operating setup — solar-backed loan (\$200K–\$250K), restaurant-backed lending, and phased deployment as gates are cleared. No year-one cash infusion.

YEARS 2–30

Same as Scenario A — no permanent change to anyone's ownership share or escalator.

TRADEOFF

Everyone receives expected year-one income. Trust starts Phase 1 without the extra \$75,800 cushion — still viable via borrowing, but less cash on day one.

Year-One Cash Flow — Side by Side

RECIPIENT	SHARE	SCENARIO A (ALL TO TRUST)	SCENARIO B (DISTRIBUTE)
Berdia (Grandma)	50.00%	\$0 cash · \$37,900 to trust	\$37,900
Reneta	16.67%	\$0 cash · \$12,633 to trust	\$12,633
Charles	16.67%	\$0 cash · \$12,633 to trust	\$12,633
Kim	16.67%	\$0 cash · \$12,633 to trust	\$12,633
Total year-one rent	100%	\$75,800 to trust	\$75,800 distributed

The Problem with Just Collecting Checks

The lease pays out ~\$3.25 million over 30 years. That sounds like a lot. But a dollar today does not buy what a dollar will buy in 10 or 20 years. This is not speculation — it is how inflation has always worked.

The 2% annual increase in the lease does NOT keep up if inflation runs at 3% (which is normal).

Grandma's Share Over 30 Years

Each Sibling's Share Over 30 Years

The checks get bigger. What they buy gets smaller. This affects everyone — not just Grandma.

The question is not how much money comes in. It is what that money can still do.

Why This Moment Matters

Solar construction begins this summer. Once income starts flowing, habits form, expectations set in, and restructuring becomes harder. **The window to act is now — measured in weeks, not years.**

Grandma is 88 years old. The trust must be formed while she has the legal authority to define how these assets are governed. That is the real deadline.

No one currently relies on solar income for day-to-day expenses. That is not a problem — it is an advantage. It means we can structure things now, before the money creates habits that are hard to change.

What We're Recommending

I am recommending that the family create a **Family Operating Trust** — a single legal structure that holds the land, the solar lease, and the restaurant together. The trust does not change who gets what. It changes how the assets are organized so they can work together instead of sitting apart.

Family Operating Trust

Holds all family assets. Grandma defines the rules. Stedmon serves as Trustee and Trust Architect.
Advisory Committee approves major moves.

Future LLCs (Phase 2, funded sequentially):

INCOME FLOWS

Reneta — 16.67% solar — **paid directly**

Charles — 16.67% solar — **paid directly**

Kim — 16.67% solar — **paid directly**

Grandma's 50% — managed through the trust (reinvested to preserve buying power)

Quick Reference — What These Terms Mean

Trust

A legal structure that holds assets on behalf of beneficiaries. The trust owns the assets; the Trustee manages them according to the rules Grandma defines. Beneficiaries receive income from the trust but do not individually own the assets — which is what protects them from probate, divorce, and forced sale.

LLC (Limited Liability Company)

A separate legal entity that owns and operates a single business. Each LLC has its own bank accounts, its own books, and its own liabilities. If one LLC fails, the losses are contained to that LLC — they do not spread to other businesses or to the trust's core assets.

SPV (Special Purpose Vehicle)

A type of LLC created for a single deal or property. In Darius's case, each real estate transaction sits in its own SPV. This isolates each deal so that a loss on one property does not affect any other.

Management Agreement

A written contract between the trust (as owner) and an operator (the person running the business). It defines the operator's compensation, authority, performance expectations, and protections. It replaces

informal handshake arrangements with legally binding terms.

What Changes

- The assets are held in one place instead of scattered
- The land is legally protected from forced sale or partition
- The restaurant is owned by the trust, operated by Stanley under a written contract that protects his role
- Grandma's 50% solar income can be reinvested to preserve its value over time
- The trust can borrow against future income to fund growth — without selling land

What Does Not Change

- Reneta, Charles, and Kim receive their 16.67% solar income, directly, unchanged
- Stanley continues running the restaurant day to day
- No land is sold
- No beneficiary takes on personal financial risk (Stedmon, as Trustee, accepts fiduciary responsibility — he is personally accountable for managing the trust properly)

The Family's Operators — Everyone Can Have a Role

This is not a plan where one person runs everything and everyone else collects checks. The vision is a family operating company — each LLC matched to a family member with real domain expertise. Every operator has a written management agreement that defines compensation, authority, and protections. Each person can choose whether to take the seat.

Stanley Harper — Restaurant + Ancillary Services

Stanley is the trust's primary operator for the restaurant. For Ancillary Services, Stanley is the natural fit as operator given his existing presence on the solar site. He would manage two LLCs under separate written agreements.

Why this matters for Stanley:

- Grandma intended for Stanley to have the restaurant. This structure honors that — his role is protected by contract, not goodwill
- Managing ancillary services expands his role and his compensation. He's not just the restaurant guy — he's the family's operating partner
- Each agreement stands on its own. If one business struggles, his role in the other is unaffected
- His compensation grows as the businesses grow (profit participation, not just salary)

Why trust-owned instead of personally owned?

	TRUST-OWNED	PERSONALLY OWNED
Borrowing power	\$200K-\$300K against documented cash flow	Limited to personal credit

	TRUST-OWNED	PERSONALLY OWNED
Succession	Clear — governed by trust rules	Probate, fragmentation, uncertainty
Stanley's protection	Contractual — legally binding agreement	Informal — depends on family goodwill
Stanley's upside	Two businesses with profit sharing in each	One business, all personal risk

Darius — Real Estate SPVs

Darius is building a real estate career in Texas. Under the trust, he operates real estate ventures through deal-specific SPVs (Special Purpose Vehicles) — each property sits in its own LLC. The trust provides deal-specific capital — earnest money, appraisal gaps, short-term bridge funding — funded from trust reserves and operating cash flow. If the coin collection appraises at significant value, the coins serve as dedicated collateral that strengthens the trust's capacity for these advances. The trust is repaid at closing plus a fee.

Darius's management agreement defines:

- His authority on each deal (sourcing, negotiation, closing)
- Compensation structure (transaction fees + profit participation)
- Performance expectations (licensed and active, with trust capital available from day one — the trust is his competitive advantage entering the market)
- The coin collection, once appraised, as an accelerant — not a prerequisite — for trust-backed real estate capital

As Darius gains experience, the trust can co-invest in property acquisitions (fix-and-flip, rentals) through property-specific entities — without drawing on solar or restaurant capital.

Kim Fox — Learning Institution

Kim is a licensed speech therapist who wants to build a long-term practice. She is the potential operator for a **Learning Institution LLC** — a trust-backed practice that leverages her professional credentials and clinical expertise.

Kim's management agreement would define:

- Full operational authority over the practice
- Compensation structure (base + profit sharing as the practice grows)
- The trust provides startup capital and operational infrastructure
- Kim's 16.67% solar income remains completely unchanged — this is a separate operating role

Kim already runs her own billing operations (with Reneta's support). The trust structure gives her practice legal protection, startup capital, and administrative backbone without personal financial risk.

Charles (Chuck) Toliver — Logistics LLC

Chuck is the potential operator for Logistics LLC. He has spent his career in logistics, driving for Pepsi, and has the domain knowledge to build a legitimate logistics company.

Chelsea (CK) Harper's experience managing last-mile delivery operations strategy across 4,300 Walmart stores represents a **significant point of leverage** for this venture — her expertise could inform the business model, operational systems, and customer acquisition strategy.

Chuck's management agreement would define:

- Full operational authority over Logistics LLC
- Compensation structure (base draw + profit participation)
- Performance expectations and contract pipeline requirements
- The trust provides startup capital; Chuck provides the operational expertise

This is not a speculative venture — it is deep industry experience operating in a domain Chuck already knows. Chuck's 16.67% solar income remains completely unchanged.

Reneta Harper — Cross-LLC Operations

Reneta is the family's operational backbone. She currently handles billing operations for Kim's speech therapy practice and co-manages the restaurant alongside Stanley. Under the trust, her role expands to provide **cross-LLC operational support** — the person who keeps the businesses running clean.

- Billing and administrative operations across trust LLCs
- Financial reporting support for the Trustee
- Vendor management and compliance coordination
- Operational continuity when individual LLC operators are focused on growth

Reneta is not an LLC operator — she is the operational infrastructure that connects them. Her compensation is defined through a trust services agreement. Her 16.67% solar income remains completely unchanged.

Stedmon Harper — Trustee & Trust Architect

I am not an LLC operator. The Trustee cannot serve as an operator — that is a direct fiduciary conflict. My role is different: I am the trust's architect. I design the systems that operators use, enforce accountability, and ensure every LLC runs the way it should.

WHAT THE TRUSTEE DOES

- **System design** — Build reporting templates, capital deployment process, gate criteria, and operator accountability frameworks that every LLC follows
- **Financial oversight** — Review monthly LLC financials, ensure books are clean, flag variances, report to beneficiaries quarterly
- **Capital deployment execution** — When the Advisory Committee approves a capital allocation, the Trustee executes it: coordinates with lenders, manages loan documentation, ensures funds reach the right LLC

- **Operator support** — Build the infrastructure operators plug into: accounting systems, compliance checklists, insurance coordination, legal templates
- **Compliance and legal** — Ensure all trust filings are current, LLC annual reports filed, insurance maintained, management agreements followed
- **Dispute resolution** — The neutral party who enforces the trust document when conflicts arise, not personal opinion
- **Succession planning** — Identify and prepare successor trustees, document all systems so the trust does not depend on any one person

WHAT THE TRUSTEE DOES NOT DO

- ◆ Does not run any individual business day-to-day
- ◆ Does not make unilateral capital decisions (Advisory Committee approves)
- ◆ Does not override an operator's authority within their LLC
- ◆ Does not use trust resources for personal benefit

Trustee compensation is defined in the trust document — a written fee structure reviewed and approved by the beneficiaries. This is not a favor. It is a professional role with personal liability and fiduciary accountability.

The Hybrid Trustee Model

The trust document will name a successor trustee in case I cannot serve. I am recommending a hybrid approach:

INDIVIDUAL TRUSTEE

Stedmon serves as Trustee — understands the vision, knows the family, built the plan. Makes decisions quickly with context, not bureaucracy.

PROFESSIONAL SUCCESSOR

A bank or trust company is named in the trust document as backup. If something happens, the trust does not stop. The institution steps in.

ADMIN SUPPORT

Trust administration service handles compliance, tax filings, quarterly reports, and record-keeping. \$1K-\$3K/yr instead of \$5K-\$10K for a full professional trustee.

Why this matters: A trust that depends entirely on one person is fragile. A trust that has documented systems, a named successor, and professional support is an institution. That is what I am building.

How the Trust Is Governed

ADVISORY COMMITTEE

Approves major decisions together. Decisions: Majority rules (2 of 3 decides).

Seat 1: Stedmon Harper (Trustee)

Seat 2: A family beneficiary

Seat 3: Family member or outside advisor

Required to approve:

New borrowing above \$50,000
Capital deployment to any LLC
New LLC formation
Related-party transactions

NOT required for:

Day-to-day operations (that's the operator's job)
Routine expenses within approved budgets
Distributions already defined by trust rules

TRUSTEE: STEDMON HARPER (TRUST ARCHITECT)

- Designs systems, templates, and processes that all LLCs operate within
- Oversees financial reporting across all LLCs
- Executes decisions approved by Advisory Committee
- Reports to beneficiaries quarterly
- Builds operator accountability frameworks
- Coordinates with CPA, attorney, and lenders
- Compensated per written terms
- Subject to fiduciary duty — personally liable
- Does NOT operate any LLC (fiduciary conflict)

OPERATORS (CURRENT AND POTENTIAL)

Stanley Harper — Restaurant LLC + Ancillary Services

Darius — Real Estate SPVs

Kim Fox — Learning Institution LLC (potential)

Charles (Chuck) Toliver — Logistics LLC (potential)

- Each operator has a separate management agreement
- Full operational authority within their business
- Operators recuse themselves from Advisory Committee votes on capital allocation to their own LLC — they do not vote on their own funding
- A beneficiary who also operates an LLC keeps their committee eligibility but must recuse on conflicts
- **The Trustee cannot also serve as an LLC operator** — this is a direct fiduciary conflict. The Trustee's role is to build the operational systems and infrastructure that operators use, and to ensure accountability across all LLCs
- Recognized through compensation, not governance

OPERATIONS: RENETA HARPER

- Cross-LLC operational support
- Billing ops, admin, vendor management
- Reporting support for Trustee

SUCCESSOR TRUSTEE (HYBRID MODEL)

- Professional trust company named as backup
- Takes over if Stedmon cannot serve
- Systems and documentation ensure continuity

BENEFICIARIES

Reneta, Charles, Kim, Berdia. Receive quarterly financial reports. Can access trust records at any time. Majority vote can remove trustee. Income distributions unchanged.

- Trust administration service handles compliance and filings (\$1K-\$3K/yr) while Stedmon serves

ACCOUNTABILITY

- Quarterly written reports to all beneficiaries
- Annual independent CPA review
- All related-party transactions disclosed in advance
- Advisory Committee minutes documented
- Any beneficiary can request records anytime

How the Trust Unlocks Capital

The trust does not create money from nothing. It borrows against **future income that is already contracted** — the solar lease. The loan is repaid from that income over time. No land is sold. No family member's income is pledged.

(Once Restaurant Financials Are Documented)

SOURCE	AMOUNT
Solar-backed loan (Grandma's share only)	\$200K – \$250K
Restaurant-backed loan (requires clean financials)	\$200K – \$300K
Equipment / working capital	\$50K – \$100K
Coin collection (accelerant) PENDING APPRAISAL	TBD
Life insurance PENDING CONFIRMATION	Unknown — may exceed amounts discussed April 12
Total Platform Capacity	\$450K – \$650K+ (before coins + insurance)

No land sold. No family income pledged.

What Does the Loan Actually Cost?

The trust borrows \$200K–\$250K against Grandma's solar income. Here is what that costs annually:

At 7-8% interest, 15-20 year term:

LOAN AMOUNT	ANNUAL PAYMENT	WHAT REMAINS OF GRANDMA'S \$37,900
\$200,000	~\$22,000	~\$15,900 free
\$225,000	~\$25,000	~\$12,900 free
\$250,000	~\$29,000	~\$8,900 free

The remaining free income goes to trust reserves. As the 2% escalator increases Grandma's share each year, the cushion grows — the loan payment is fixed but her income is not. After the loan is paid off (year 15-20), Grandma's full solar income flows to the trust — no debt service, just capital.

The Capital Plan — Phased, Gated, One Step at a Time

Capital is not deployed all at once. Each phase has a **gate** — conditions that must be met before the next phase begins. If a gate is not cleared, the plan pauses. It does not collapse.

Long-Term: Years 5–30

Once multiple businesses are operating and cash-flowing, the trust shifts from building to cycling. Profits return to the trust. Debts get paid down. Capital is recycled into existing or new ventures.

The objective is not aggressive growth for its own sake. It is building self-sustaining income streams that outlive the solar lease — businesses that generate their own

revenue, create real jobs, and compound the family's position over decades. Discipline, not passivity.

Restaurant profits also flow into Trust Treasury

Side-by-Side: 30-Year Outcome

DO NOTHING

SIBLINGS' INCOME

Same (16.67% each)

GRANDMA'S INTENT

Defined by Grandma's explicit decisions

ASSET PROTECTION

Held together by legal structure

WHAT HEIRS INHERIT

A funded trust with education support, venture capital, and ongoing business income

The Core Difference

The Design Principle

Every operating venture sits inside its own LLC. If one fails, the loss is contained to that LLC. It does not touch the land, the solar lease, or anyone else's income.

What Can Go Wrong — Scenario by Scenario

SCENARIO	WHAT HAPPENS	WHO IS AFFECTED
Solar delayed past 2026	Phase 1 borrowing is delayed. No losses.	Nobody. Lease terms unchanged.
Ancillary LLC fails to win contracts	Equipment sold. LLC wound down. Max loss: \$75K.	Trust absorbs \$50K–\$75K loss. Nobody else.
Restaurant revenue drops	Expansion pauses. Solar income untouched. No cross-default.	Trust only. Solar distributions continue.
Everything goes wrong at once (worst case)	Freeze deployments. Service debt. Max exposure: \$150K–\$200K.	Trust contracts but does not collapse. Land, solar, and family income intact.
Governance conflict	Trustee removed by beneficiary vote. Successor takes over.	Authority changes. No assets lost.
Real estate deal goes bad (Darius)	Loss contained to that deal's LLC. Property sold to recover.	Trust absorbs loss on that deal only.
Family disagrees about the trust	Trust structures Grandma's share independently.	Nobody's income changes. Siblings keep 16.67%.

Risk Summary

RISK	MAX LOSS	LAND AT RISK?
Solar delay	\$0	No
Ancillary LLC fails	\$75K	No
Restaurant decline	\$150K	No
Real estate deal fails	Per deal	No

RISK	MAX LOSS	LAND AT RISK?
Worst case combined	\$200K	No
Governance conflict	\$0	No
Inflation (do nothing)	Unlimited	N/A

The Risk of Doing Nothing

Doing nothing is not risk-free. It is a choice to let inflation erode the value of the family's income over 30 years.

This plan does not eliminate risk. It replaces the slow, invisible risk of inflation with contained, manageable, defined risks — each one capped, isolated, and reversible.

The Trust Is Not a 30-Year Project. It Is a Permanent Family Institution.

The solar lease lasts 30 years. The trust does not. The trust is designed to hold the family's assets together **across generations** — long after the solar checks stop.

The assets — land, restaurant, operating businesses — stay in the trust. They do not get divided up when someone passes. What flows out to family members is **income from those assets**, not the assets themselves.

GENERATION 1

Grandma + Her Children

Reneta

16.67% solar income — paid directly, unchanged. Cross-LLC operations (billing, admin, reporting). Already handles Kim's billing + co-manages restaurant.

Charles (Chuck)

16.67% solar income — paid directly, unchanged. Potential operator of Logistics LLC.

Kim

16.67% solar income — paid directly, unchanged. Potential operator of Learning Institution LLC.

Grandma

50% solar income managed through trust. Her intent defines how assets are structured.

Stanley

Operates Restaurant LLC + Ancillary Services LLC. Compensated through management agreements. Role protected by contract.

Darius

Operates Real Estate SPVs. Deal-specific trust capital from reserves and cash flow. Coin collection strengthens trust balance sheet. Management agreement protects role.

Stedmon (Trust Architect)

Trustee — designs systems, builds infrastructure, enforces accountability across all LLCs. Does not operate any LLC (fiduciary conflict). Coordinates with CPA, attorney, lenders. Professional trust company named as successor. Author of this brief.

GENERATION 2

The Children and Grandchildren

If a beneficiary passes, their solar income share transfers to their children. Their beneficiary status in the trust transfers to their children. Nothing about the trust structure changes.

What heirs receive: Solar income (their parent's share), distributions from trust-owned businesses, education funding, and venture support.

YEAR 30+

After the Solar Lease Ends

The solar checks stop. But the trust still owns: 109 acres of land, a restaurant (or whatever it has become), operating businesses built during the lease years, and cash reserves and investment returns.

The trust is self-sustaining. The businesses and assets generate income for heirs. The land can be re-leased, developed, or held. The family still has a platform — not just memories.

What "Success" Looks Like

10

YEARS

Solar income flowing, trust debt largely paid down. Restaurant expanded. Ancillary services operating profitably. Darius building real estate practice. Kim's learning institution established. Chuck running logistics. Reneta keeping ops clean. Heirs receiving distributions from multiple income sources. Education fund supporting the next generation.

20

YEARS

Multiple businesses generating independent income. Solar income still flowing (10 years remaining). Trust is self-sustaining — not dependent on any single income source. Next generation stepping into operator and leadership roles. Trust reserves growing as businesses mature.

30

YEARS

Solar checks stop — but the trust doesn't. The land is still there, available for re-lease or new development. The businesses built during the lease years ARE the income engine now. The family has a funded institution, not just a piece of land and a memory.

The Steps, In Order

Updated after the April 12, 2026 family meeting. Use the **action checklist** to track assignments between meetings.

Trust formed, assets transferred, operating agreements signed

7

TBD **PENDING ORION**

Solar construction begins

Originally targeted summer 2026 — date may slip; follow up with Orion for firm timeline

8

TBD (AFTER CONSTRUCTION) **PENDING**

Solar reaches commercial operation — full rent begins

9

AFTER COD **PENDING**

Phase 1 capital deployed

Decide at a future meeting: reinvest year-one solar income into trust vs. distribute as planned — **see both scenarios**

What Each Person Should Know

The Bottom Line

The family owns valuable assets — land, a 30-year solar lease, and an operating restaurant. Today these assets sit apart, unstructured, and exposed.

This plan puts them together in a single legal structure that:

- **Protects** the land from forced sale
- **Protects** the restaurant from probate and fragmentation
- **Preserves** everyone's income exactly as it is
- **Unlocks** \$450K–\$650K in capital without selling anything
- **Creates** new income sources that outlive the solar lease — each one operated by a family member with real domain expertise
- **Contains** all risk to individual LLCs with defined maximum losses
- **Gives everyone a role** — Stanley (restaurant + ancillary), Darius (real estate), Kim (learning institution), Chuck (logistics), Reneta (cross-LLC operations), Stedmon (trust architect — builds the systems, not the businesses)
- **Funds** education and ventures for the next generation from trust reserves, operating profits, and life insurance proceeds
- **Carries out** Grandma's intent explicitly, not by default

This is not a 30-year plan. It is a permanent family institution.

The solar lease is the starting engine. The businesses built during those 30 years become the engine that runs after. Trust reserves, operating profits, and life insurance proceeds fund education and ventures for future generations. The heirs don't just inherit checks — they inherit a platform.

Everyone can choose what they want to do. But this is the big vision: every LLC matched to a family member with real expertise, every role protected by contract, every person opted in on their own terms.

Nothing in this plan requires anyone to give up what they have. It requires us to organize what we already own — while Grandma is here to define how it's done.

Questions are welcome. This document exists so the conversation starts from shared understanding, not assumptions.
